When connecting two components together we need a way to **synchronize** them. Put another way, each devices needs to know the status of the other. This is true if the devices are hardware, software, or in this case we have hardware connected to software.

VIDEO 11.1 DEVICE COMMUNICATION REQUIRES SYNCHRONIZATION

DR. RAMESH YERRABALLI: Let's look at device communication.

Let's say we have two devices, A and B, that want to communicate.

One of the things that we have to address in this communication is synchronization.

Synchronization is simply a process by which we bridge the speed mismatch between

EdX is a non-profit created by founding partners Harvard and MIT whose mission is to bring the best of higher education to students of all ages anywhere in the world, wherever there is Internet access. EdX's free online MOOCs are interactive and subjects include computer science, public health, and artificial intelligence.
