labs 12-15 materials after Wed. May 21st

Hi,

I thought this class was an excellent review of embedded systems related things I've done before with some new things added as well. i've done enough to earn a certificate, but given my goal was to review my embedded systems of past lives by taking the class, and I know I will not finish all labs before Wed. May 21st, I was wondering if the graders will continue to be up for awhile after the course ends. I know you can't enter grades after Wed. May 21st, but I was wondering if because the materials are still going to be up for awhile if you are able to determine by running the test suite if a lab works or not.

I'm almost done with Lab 12 today, but it is not working 100%. I would like to finish labs 13-15 too, and I know lab 15 had no grader, and you can download others' games to see what they did from the playlist posted even if you have not implemented your own. But I was wondering if by Wed. I don't finish labs 12-14, if you can still on Th/Fri or next week access the lab graders to see if you implemented the lab correctly.

If not, no problem, I'm just wondering whether or not to bother finishing up the labs I never finished if they are not all done by the end of Wed. I did complete all lecture videos, quizzes, etc, and got all but labs 12-14 100% working, and 12 is close today but I won't be able to work on this again until Wed. since tomorrow I'm away from the computer all day. So Wed. is the last day and I know I won't finish 12-14 on Wed., so please let me know if I should still do them, or otherwise I'll just download the project starter code, in case I ever want to reference it even though I never debugged the last few labs.

Thanks for a great review of embedded systems!
Karen

lab12

lab13

lab14

lab15
