just checking - labs 7,8,9

Hi,

I just went to my "Progress" section on the Embedded Systems web page and although I am behind, there (?) could be some confusion, not sure. I see that labs 7,8,9 have my grades if you scroll down the page, but if you look up at the histogram / bar chart, there is no bar and a grade of zero for labs 7,8,9 in the histogram, yet if you look down the page, you can see that I did get those labs working correctly.

I know this course ends officially due to the extension on May 14th, and I'm still catching up, but hope to finish it. It's been a great view of my former work area and some education of my past in the embedded systems world. I'm just finishing up C12's quiz today, and will then move onto C13. I know there is a C14 and C15 which I hope to get to before May 14th! In terms of labs, I got stuck on lab 10--still don't know why my FSM was not working correctly. But if I finish the quizzes for these sections I'm behind on, I'll go back and see if I can also finish up the labs not completed too (get lab 10 working, and do labs 11-14 - we'll see!) In any case, I'm enjoying my embedded systems review course.

If I'm still unemployed by mid-May when this embedded systems review course ends, well I'll go back to my skill expansion phase I was working on before! Thanks for your help.

lab7

lab8

lab9

the students' answer, where students collectively construct a single answer

oops--I think this is my goof -- the labs do not get listed in the bar chart according to the number it has in the C1-C14, etc. I had forgotten that some weeks did not have a lab. Sorry for the confusion! ;-) I'm guessing this is it.

So the lab where I left off - lab10 on FSMs where mine never worked correctly - is listed in the bar chart histogram as lab 7. Now it makes sense! ;-)

Hopefully I'll have time after I catch up to get them all done - we'll see!
